IMPORTANT SERVICE SAFETY PRECAUTION

■ **Service work should be perfomed only by qualified service technicians who are thoroughly familiar with all safety checks and the servicing guidelines which follow:**

WARNING

1. For continued safety, no modification of any circuit should be attempted.
2. Disconnect AC power before servicing.

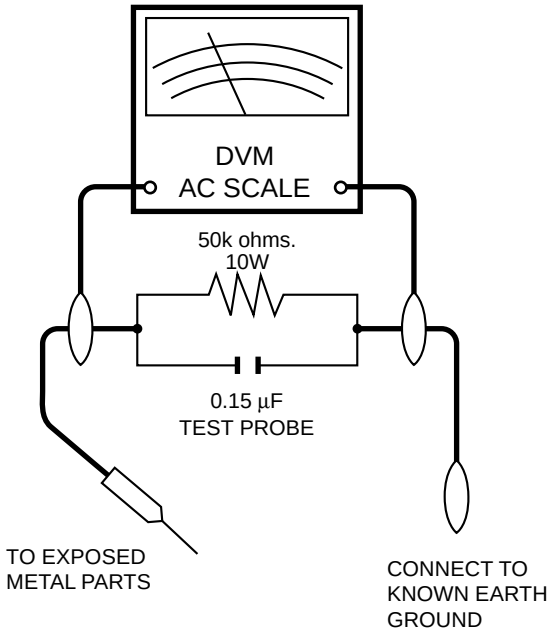
CAUTION: FOR CONTINUED PROTECTION AGAINST A RISK OF FIRE REPLACE ONLY WITH SAME TYPE FUSE. F3701 (1.25A, 250V), F3702 (1.25A, 250V), F3751 (2.0A, 250V) FUSE.

BEFORE RETURNING THE RECEIVER (Fire & Shock Hazard)

Before returning the receiver to the user, perform the following safety checks:

1. Inspect all lead dress to make certain that leads are not pinched, and check that hardware is not lodged between the chassis and other metal parts in the receiver.
2. Inspect all protective devices such as non-metallic control knobs, insulation materials, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacitor networks, mechanical insulators and etc.
3. To be sure that no shock hazard exists, check for leakage current in the following manner.

- Plug the AC cord directly into a 110~240 volt AC outlet, and connect the DC power cable into the receiver's DC jack. (Do not use an isolation transformer for this test).
- Using two clip leads, connect a 1.5k ohm, 10 watt resistor paralleled by a 0.15µF capacitor in series with all exposed metal cabinet parts and a known earth ground, such as electrical conduit or electrical ground connected to an earth ground.
- Use an AC voltmeter having with 5000 ohm per volt, or higher, sensitivity or measure the AC voltage drop across the resisor.
- Connect the resistor connection to all exposed metal parts having a return to the chassis (antenna, metal cabinet, screw heads, knobs and control shafts, escutcheon and etc.) and measure the AC voltage drop across the resistor.
  All checks must be repeated with the AC cord plug connection reversed. (If necessary, a nonpolarized adaptor plug must be used only for the purpose of completing these checks.)
  Any reading of 35V peak (this corresponds to 0.7 milliamp. peak AC.) or more is excessive and indicates a potential shock hazard which must be corrected before returning the monitor to the owner.



SAFETY NOTICE

Many electrical and mechanical parts in LCD television have special safety-related characteristics.
These characteristics are often not evident from visual inspection, nor can protection afforded by them be necessarily increased by using replacement components rated for higher voltage, wattage and etc.
Replacement parts which have these special safety characteristics are identified in this manual; electrical components having such features are identified by " ⚠ " and shaded areas in the ***Replacement Parts Lists*** and ***Schematic Diagrams***.
For continued protection, replacement parts must be identical to those used in the original circuit.
The use of a substitute replacement parts which do not have the same safety characteristics as the factory recommended replacement parts shown in this service manual, may create shock, fire or other hazards.

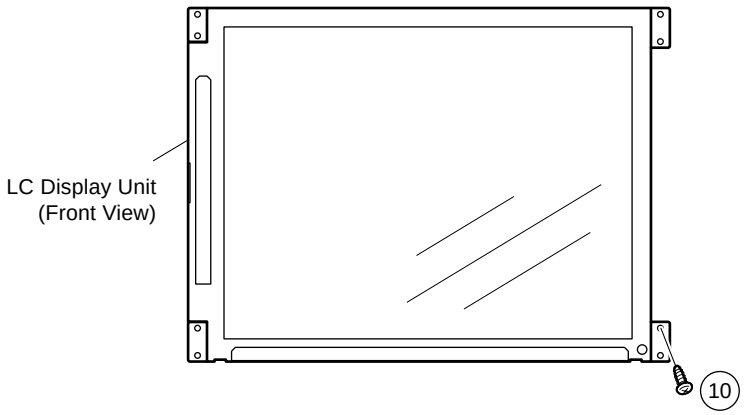
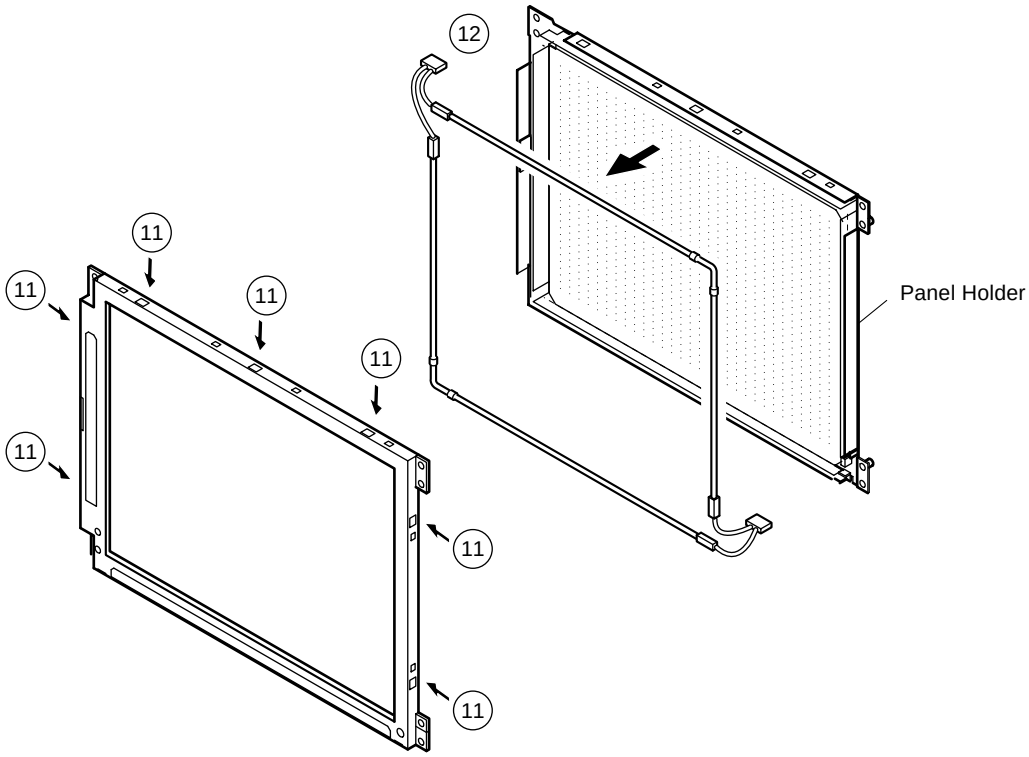
10.Remove the lock screw ⑩ off the LC display unit.
11. Undo the seven hooks ⑪ to release the unit frame.
12.Detach the fluorescent lamp.





ADJUSTING PROCEDURE OF EACH SECTION

The best adjustment is made before shipping. If any position deviation is found or after part replace is performed, adjust as follows.

1. Preparations for Adjustments

Use the specific AC adaptor or a regulated DC power supply.
AC adaptor : UADP-0209CEZZ (Type 10 non-polar LC10A2H/M)
DC power supply : 12 V, 3.2 A

2. Calling the adjustment process mode

The mode can be called up in the following two ways.

- Turn on the power and press the ADJUST PROCESS key on the remote controller.
- Set either the KEY4 (Pin 81 of microprocessor) or KEY5 (Pin 82 of microprocessor) to the L level and turn on the power.

3. Key operation in adjustment process mode

Selecting a reception channel

- Using the CH UP/DOWN keys, search up and down a reception channel.
  Clicking on the keys : Channels are selected up or down one by one.
  Holding down the keys : The next receivable channel is searched up or down.
- Various adjustments
  Each of the adjustments is made by selecting an item on the menu and using the CH UP/DOWN and VOL UP/DOWN keys (on the TV set and remote controller).
- Using the menu select key, the adjustment items are picked up alternately. (Picking the next item)
  When the bottom item is selected and the menu select key is activated, the top item on the next page will be selected instead.
- Using the picture select key, the adjustment items are picked up alternately. (Picking the previous item)
  When the top item is selected and the picture select key is activated, the bottom item on the previous page will be selected instead.
- When an item is selected and the auto preset key is activated, the top item on the next page will always be selected.
  Page 1 → Page 2 → ... → Page 15 → Page 1 ...
- When an item is selected and the manual memory key is activated, the top item on the same page will always be selected.
  Using the VOL UP/DOWN keys, the setting of the selected item can be turned up or down.
- Suppose PAL/NTSC is selected for p.14 and p.15. Using the VOL UP/DOWN keys, the register select mode is called and the cursor goes to Address 01.
- The CH UP/DOWN keys are used to move up and down the cursor and the VOL UP/DOWN keys to move it right and left. The key 12 is then used to fix an item. Once fixed, the cursor will go to the item's current setting. Using the VOL UP/DOWN keys, modify the setting as required.

  Save the setting with the key 12 and return to the address select screen. Using the menu select key as usual, move to the next item. The cursor moves as follows by using the VOL UP/DOWN keys on the address select screen.

  Example : 01 ←→ 02 ←→ 03 ←→ 01 ←→ ...

  The cursor moves as follows by using the CH UP/DOWN keys.
  Example : 02 ←→ 05 ←→ ... ←→ 06 ←→ 02 ←→ ...

4. Initialization

Here is the procedure of initializing the EEPROM and making model number and size settings.

4-1. Get Pins (81) and (82) of the IC2001 (microprocessor) grounded and turn on the power.
4-2. Select a model number (A1, A2H, A2U). For Models LC-10A2H and LC-10A2M, select A2H.
4-3. Select a size in inches (10, 12, 15, 20). For Models LC-10A2H and LC-10A2M, select 10.
4-4. Get Pins (81) and (82) of the IC2001 (microprocessor) back to normal.

5. Adjustments

5-1. +B adjustment
Vary the "+B-ADJ" setting on Page 1 of the adjustment process so that the voltage at pin 49 of SC401 be 5.00 ±0.02 V.
Note : Adjust precisely to 5.0 V because this level will be used as supply voltage reference.

5-2. Counter-bias adjustment
Vary the "COM BIAS" setting on Page 2 of the adjustment process so that the contrast be sharpest (black looks most sinking). The adjustment guideline is around 117 for Model LC-10A2H.

5-3. White balance adjustment
Vary the "RCUTOFF" and "BCUTOFF" settings to achieve optimum white balance.
Note : For the "RCUTOFF" and "BCUTOFF" settings, keep the readings in the range of -10 to +10. If out of this range, the user-adjustable range is reduced.

6. Factory settings

- When using the adjustment remote controller:
The factory settings are made using the adjustment remote controller. Here are some differences between the different models.

Model number	Key name	Remote control code	Setting S-SYSTEM	OSD language for settings
LC10A2H	Factory setting 1	100000111111110	I	CHINESE
LC10A2M	Factory Setting 2	100000001010110	B/G	ENGLISH

- When not using the adjustment remote controller:
(Applicable only with Model LC-10A2H. For Model LC-10A2M, make the following settings, and select English and B/G for OSD language and S-SYSTEM, respectively.)
Hold down the TV/VIDEO and MENU keys on the TV set and turn on the power. Make sure the character "K" appears at the top left on the screen. Then press the VOLUME UP and CH UP keys at the same time.
